Lesson 8 Self Evaluation Questions:

- NB** 1 Explain who may carry out isolations on High Voltage Apparatus under these Regulations.

- NB** 2. List the type of permit that will be issued for work on a 3.3 kV C.W. pump if work is to be done on the pump.

- NB** 3. Explain who will carry out the electrical isolation on a 3.3 kV C.W. pump if work is to be done on the pump.

4. Define Domestic circuit.

5. Define apparatus.

NB 6. State the precautions to be taken when work is to be performed on low voltage electrical plant which could not be switched off or isolated.

NB 7 Explain who may perform work on low voltages electrical plant which could not be isolated.

8. List three devices used for electrical isolations.

9. Explain the results when current is interrupted by the opening of isolators or the removal of fuses.

10. Explain what isolations are necessary to work on plant provided with a circuit breaker.

NB 11 Explain what isolations are necessary to work on plant provided with an isolator.

12 Explain what isolations are necessary to work on plant provided with a fused isolator.

NB 13. State the requirements regarding a barrier on fuses for isolation purpose.

14. Explain the requirements that must be met when a door is used as a barrier for fuses.

15. Describe the safety testing procedure with an approved testing device.

16. Explain the process to be followed when the safety test cannot be carried out by the Appointed Person.

NB

17. Define power circuit.

18. Define dead.

19. Explain why speed above barring speed is not accepted as dead.

NB 20. Define isolate.

21. Explain what is meant by a clean hand approach.

22. What is defined as portable electrical equipment as stated in the definition and give two examples?

23. Which electrical installation requires a certificate of compliance?

24. List five types of PPE clothing and equipment required for work in a battery room.

NB 25. Explain in detail the circumstances under which gas monitoring will be required in battery rooms.

NB

26. Explain the safety precautions if work must be performed below power lines.

27. Explain the meaning of two squares on portable electrical equipment.

LESSON 9:

Mechanical Plant: General

Learning Outcomes

At the end of this session, the learner will be able to demonstrate understanding of:

- 1 General Mechanical isolations regarding different sections of plant
